

Sigma Logs

Search. Monitor. Report

Sigma Logs enables you to search, monitor and report TRIM, Records Manager, Content Manager (CM) audit logs.

This handy tool helps Administrators track down what happened (and when) without the pain of looking through hundreds or even thousands of individual log files. Sigma Logs can be used to:

- Identify who has been logging in,
- Discover the most active users,
- Identify failed logins,
- Know when access controls and security settings have been changed,
- Take action on security breaches,
- Report on logged events,
- Automatically pick up new object and event types that come with new versions, or
- Automatically add new events as they are added to new versions of CM.

Investigate

Sigma Logs includes an investigative tool to extract information from general use statistics. These include but are not limited to:

- Determine how many records are being generated over a period of time,
- Find out how many users are performing a particular action,
- Extract data into a tab delimited text file which can be read in MS Excel, or
- Files can be imported into an external database.

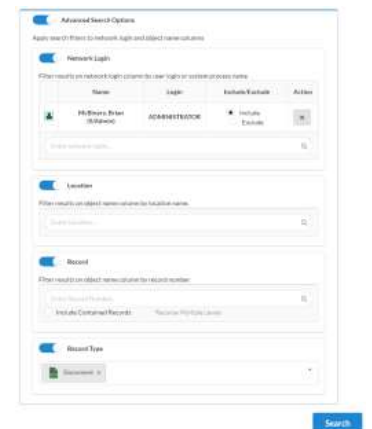

Comprehensive Searching

Sigma Logs is designed to allow the user to search CM Audit Logs using the following parameters:

- Date range
- Event
- The user that performed the event
- CM record
- CM record type
- CM location
- Free text

Search parameters can be saved and loaded. Search results can be exported to a file or printed.

Desktop

- Available in 32 bit or 64 bit versions
- Compatibility: Up to CM 9.4

Web

- New reporting framework with the following reports:
 - Actions Completed in last month
 - Actions Assigned in last month
 - Records created in last month
 - Records Registered in last month
- Available in 64 bit version only
- Compatibility: Up to CM 9.4

Installation

Sigma Logs Desktop can be installed anywhere (client or server) where there is access to the log files generated within CM. Searching can then be performed over multiple log files with date range filters to limit results.

Sigma Logs Web requires installation on a server with IIS.

Compatibility

Sigma Logs is a mature product that continues to be developed ensuring compatibility across all supported TRIM, Records Manager, Content Manager and Microsoft Windows versions.

Support

Our standard software support agreement includes access to the support help desk and new versions of the product as they become available.

How to Buy
